

I9- DMC Dual Pump Controller

PRODUCT DESCRIPTION

This is a special model that operates Two pumps simultaneously. It has two individual control relays to ON/OFF two pumps respectively, when there is no water in the Sump the sump motor will be disabled and the bore will continue its operation. By this way, it ensures the operation of two pumps with enough power rating. Whenever the overhead tank reaches its minimum water level, it will switch ON both pumps and switch OFF both pumps if the overhead tank level reaches its maximum level. It will provide Dry-run protection to both pumps and hence pump burnout is avoided and the tank gets filled equally...We offer this model in single phase and three phases to suit all types of pumps like Jet Pumps, Monoblock Pumps, Submersible Pumps & Compressor Pump

FEATURES

- * Real-time level indication
- * Bore pump status LED
- * 4-level indication for OH Tank (25,50,75,100%)
- * 3-level indication for UG SumpTank (FVL,50,100%)
- * Fully / Semi-automatic operation
- * Voltage surge protection
- * Dry run protection
- * Auto / Manual mode
- * Fill option to start the motor manually @ any level.
- * Mute option for Buzzer
- * Rocker Switches for Auto / Bypass Function
- * In-Built Relay 30-40A
- * Wall Mountable & ABS Design
- * SS-316 grade Anticorrosion Sensors.
